

Creating a Telegram Bot for Inventory Inquiries

Objective

This SOP outlines the steps to build a Telegram bot that utilizes Pinecone and Airtable for inventory management and customer inquiries.

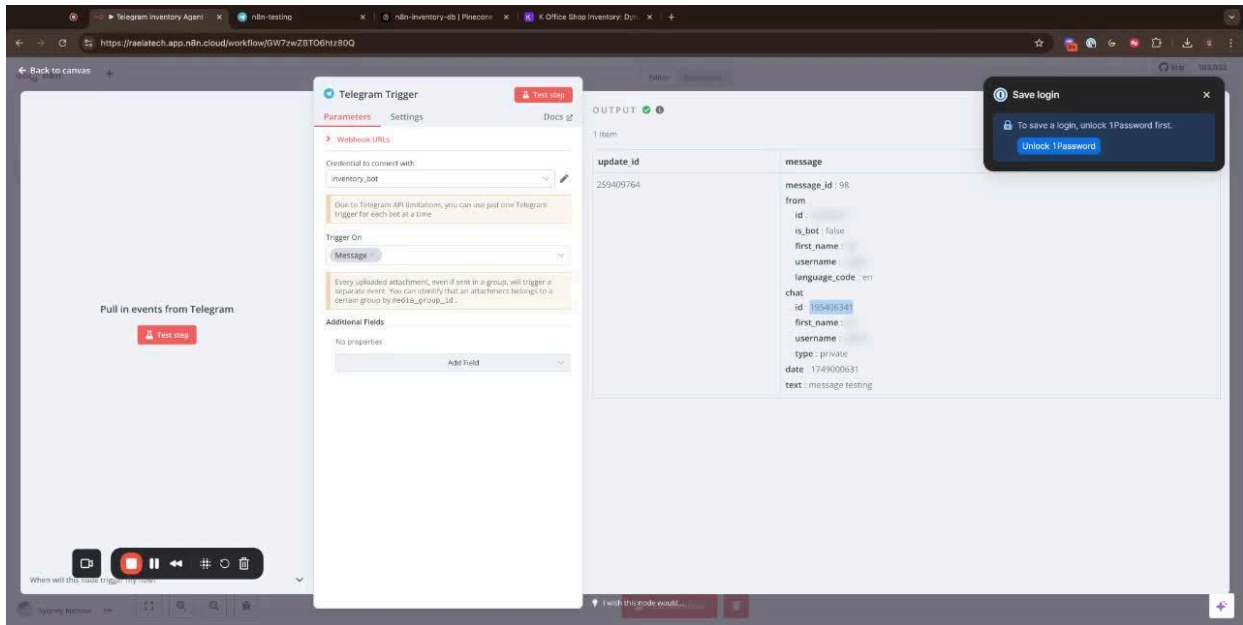

Key Steps

1. Connect Telegram Account 1:18

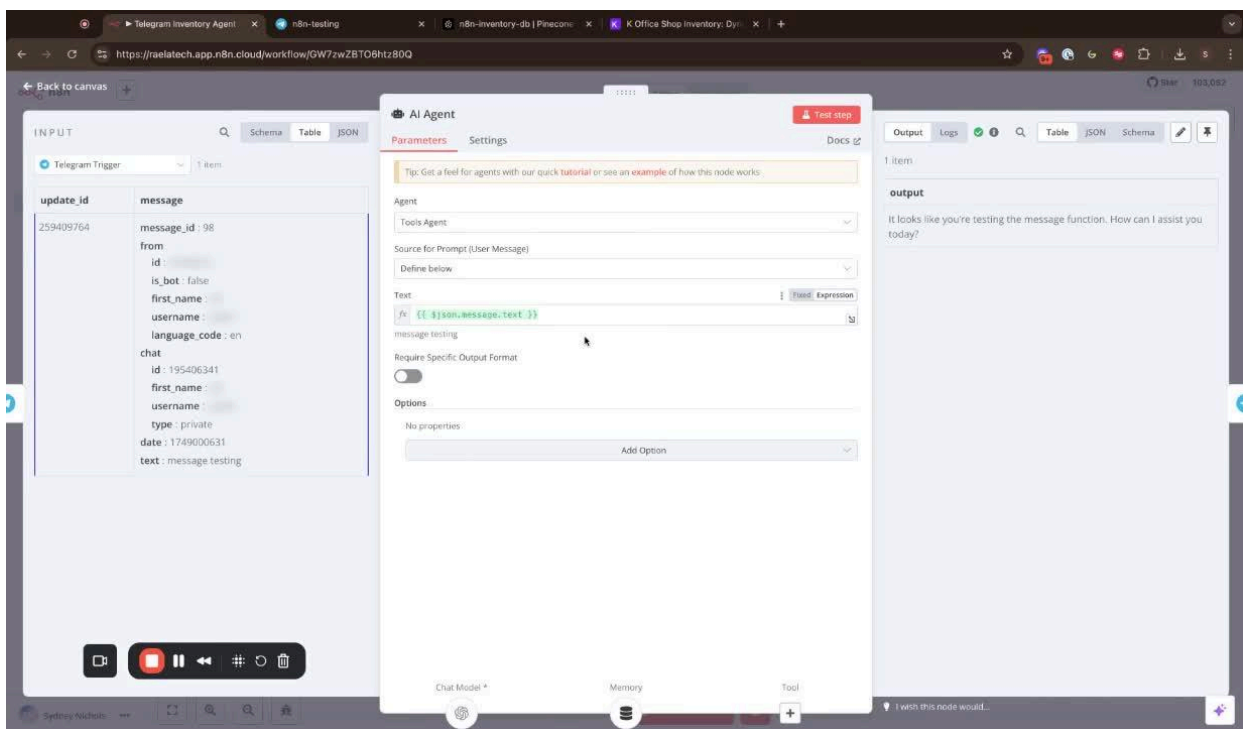

- Open your automation tool and find the app event for Telegram.
- Select 'On Message' to set up the trigger for incoming messages.
- Connect your Telegram account using the access token.

2. Set Up Basic Agent Response 2:37

- Create a basic agent response that acknowledges incoming messages.
- Map the incoming message to the agent's response.

3. Configure Agent Context 4:49

- Go to the options and select 'System Message' to provide context for the agent.

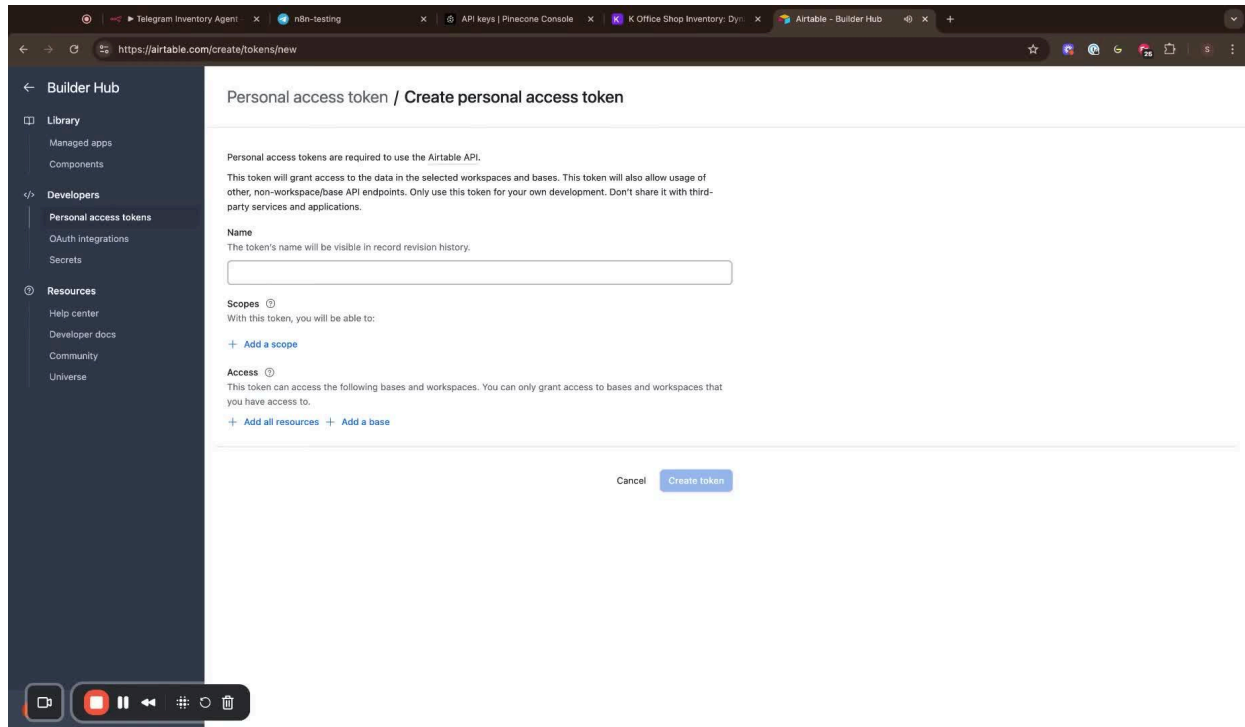

- Define the purpose of the agent, such as helping customers find products and checking availability.

4. Set Up Pinecone Tool 9:07

	Product ID	Product Name	Category	Description	Price	Stock Quantity	Brand

		Pendaflex Hanging File F...	Filing & Storage	Letter-size hanging folder...	\$19.99	62.0	Pendaflex

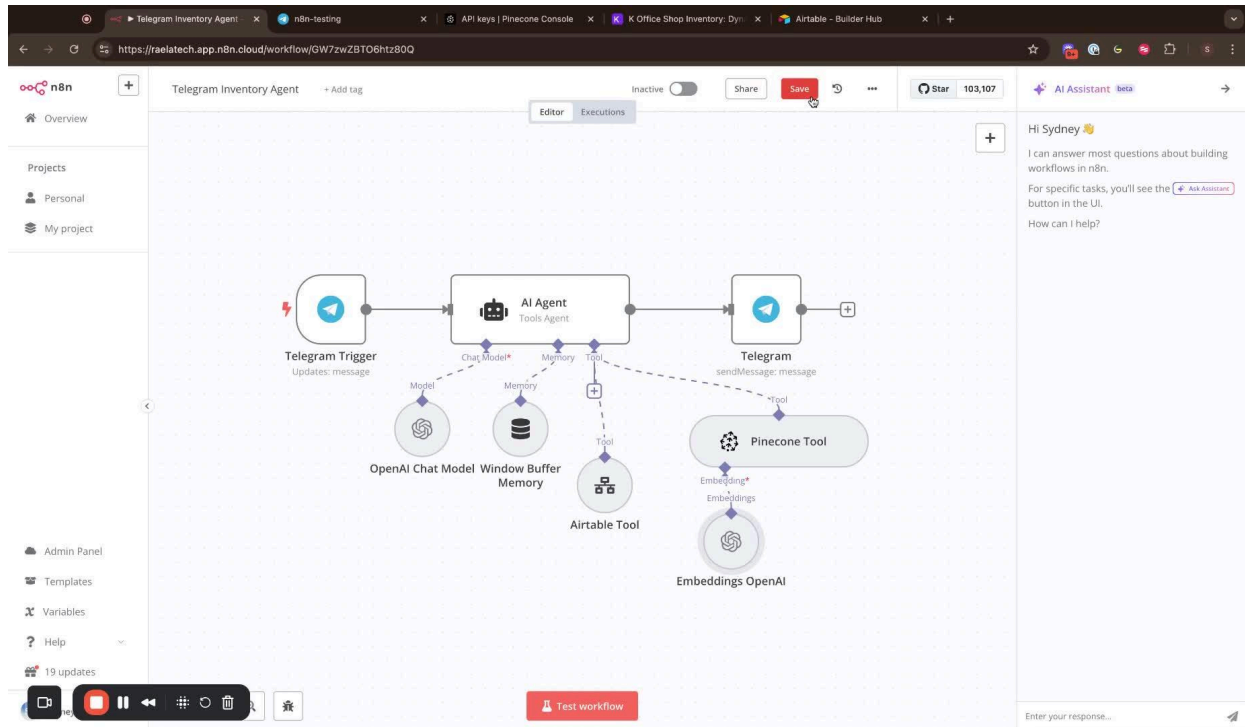

- Create a Pinecone tool for inventory management.
- Input the API key and select the appropriate operation mode (retrieve documents).
- Define the Pinecone index and set the description for the tool.

5. Set Up Airtable Tool 11:09

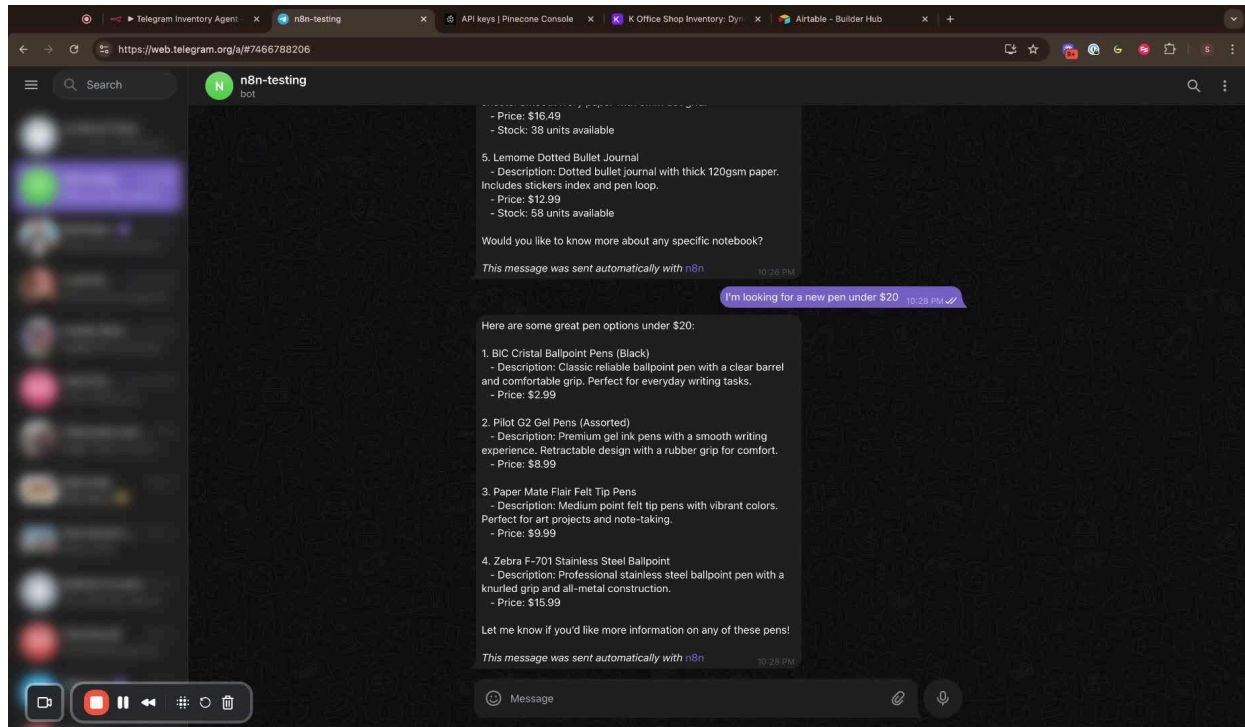

- Create an Airtable tool named 'Inventory Bot Tool'.
- Ensure it has read and write scopes for accessing inventory data.
- Connect the Airtable tool using the generated access token.

6. Test the Workflow 14:42

- Conduct a test of the entire workflow to ensure the bot responds correctly to inquiries.
- Check if the bot retrieves accurate product information based on user queries.

7. Troubleshoot and Refine 15:55

- Review logs for any errors or issues during the test.
- Make adjustments to the agent's responses and the data retrieval process as needed.

Cautionary Notes

- Ensure that the access tokens for both Telegram and Airtable are kept secure and not shared publicly.
- Test the bot thoroughly to avoid incorrect responses to customer inquiries.

Tips for Efficiency

- Use clear and concise naming conventions for tools and variables to make the setup easier to understand.
- Regularly update the inventory data in both Pinecone and Airtable to ensure accurate information is provided to users.
